

### TEST SIGNAL

The test signal is a continuous sound that lasts for seven seconds.

### PUBLIC WARNING SIGNAL

The public warning signal is a rising and falling sound that lasts for one minute.

### ALL-CLEAR SIGNAL

The all-clear signal is a continuous sound that lasts for one minute.

# PUBLIC WARNING SIGNAL

**The public warning signal warns of smoke, gas or other hazardous substances – public warning sirens are tested on the first Monday of each month, with the exception of public holidays.**

If you hear the public warning signal while outside, seek shelter indoors. Once inside, close the doors, windows and air vents, and shut off ventilation, if possible. When the danger is over, the all-clear signal will be sounded.

Warning sirens are tested at 12.00 noon on the first Monday of each month, with the exception of public holidays. The test may also include an announcement 'hälyttimien kokeilu, prov alarm, testing sirens'. The test signal does not require people in the area to take any action.
